Welcome to AOSC i3 Edition!

Cheatsheet

The default mod-key is **<Super>** (Windows-key).
Look&Feel can be changed with **Lxappearance.**
For wallpaper selection use **Nitrogen.**

Most important shortcuts
Open new terminal window - **mod+<Enter>**
Kill focused container - **mod+<Shift>+q**
Open dmenu – **mod+d**
Categorized menu 'morc_menu' - **mod+z**

Tile vertically - **mod+v**
Tile horizontally – **mod+h**
Toggle split direction - **mod+q**
Toggle floating - **mod+<Shift>+Space**
Toggle fullscreen - **mod+f**
Toggle sticky - **mod+<Shift>+s**
Hide/show i3status-bar – **mod+m**

Application Shortcuts
Bmenu (CLI configuration tool) - **mod+Ctrl+b**
Web Browser Firefox - **mod+F2**
Filemanager Pcmanfm – **mod+F3**
~~Root Filemanager - **mod+<Shift>+F3**~~
Pavucontrol – **mod+<Ctrl>+m**
System Monitor htop - **mod+F5**
Screenshot of whole screen - **<Print>**
Screenshot of focused container - **mod+<Print>**
Screenshot of selection - **mod+<Shift>+<Print>**
Switch off transparency (kill Compton) - **mod+t**
Switch transparency back on - **mod+<Ctrl>+t**
Restart Dunst - **mod+<Shift>+d**
Xkill – **mod+<Ctrl>+x**

Navigation
Change focus - **mod+arrowkeys** or **mod+j,k,l,ö**
Change focus between tiling / floating windows - **mod+space**
Move focused container - **mod+<Shift>+arrowkeys** or **mod+<Shift>+j,k,l,ö**

Switch to workspace number 1-8 - **mod+1-8**
Navigate between workspaces - **mod+<Ctrl>+<Right>/<Left>**
Send focused container to workspace number 1-8 - **mod+<Ctrl>+1-8**
Move to workspace 1-8 with focused container - **mod+<Shift>+1-8**
Workspace back-and-forth – **mod+b**
Move container to workspace back-and-forth – **mod+<Shift>+b**
Resize container - **mod+r** followed by arrowkeys or j,k,l,ö (or **mod+<right-click>**)
(Exit resize mode with **<Enter>** or **<Esc>**)
Resize gaps – **mod+<Shift>+g** followed by **o** (outer gaps) / **i** (inner gaps) and **+** / **-** / **0**

(Exit gaps mode with **<Enter>** or **<Esc>**)
Move focused container to scratchpad – **mod+<Shift>+-**
Show (next) scratchpad window – **mod+-**

Change desktop behaviour
Stacking - **mod+s**
Tabbed - **mod+w**
Tiling / toggle split – **mod+e**

Audio:
The default is **Pavucontrol** with **Volumeicon**. The Volumn buttons on your keyboard will work fine as well.

~~Change window borders (available with i3-gaps)~~
~~None - **mod+u**~~
~~2 pixels - **mod+y**~~
~~Normal – **mod+n**~~

Reload the configuration file - **mod+<Shift>+c**
Restart i3 in-place - **mod+<Shift>+r** (preserves and reloads your session)

Lock screen - **mod+9**
Exit session - **mod+0** and select:
(l)ock, (e)xit, (s)uspend, switch_(u)ser, (h)ibernate, (r)eboot, (<Shift>+S)hutdown
(cancel with **<Enter>** or **<Esc>**)
or
Exit i3 - **mod+<Shift>+e** (logs you out of your Xsession)

Tweaking

Desktop Widgets Customization
You can disable or enable conky widgets in `~/.config/conky/auto-conky.py`. Feel free to modify the conkyrc files to meet your needs. The weather location config is in `~/.config/conky/weather_update.py`. If you don't have an API Key for openweathermap or don't want the widget, you can always remove it from `auto-conky.py`.

HiDPI Adjustment
The easiest way to change HiDPI settings is to use **gnome-settings-daemon**.
Use `apt install gnome-settings-daemon` to install **gnome-settings-daemon.**
And type `gsettings set org.gnome.desktop.interface scaling-factor 2` in a terminal

Fcitx Input Method
To make fcitx start at boot, add the following line to i3config
`exec --no-startup-id fcitx`

!! All i3 settings can be edited in `~/.config/i3/config` **!!**

HAVE FUN !
